SWIMMING POOL PERMIT APPLICATION

OWNER _____

CONTRACTOR _____

PHONE NO. _____

PHONE NO. _____

ADDRESS _____

ADDRESS _____

APPLICANT/CONTACT PERSON _____

The application must be accompanied by the following information:

1. Two (2) copies of all structural plans and details for an in-ground pool, or one (1) copy of the manufacturer's installation information for an above-ground pool. (Please note that the manufacturer's information submitted for an above-ground pool will not be returned to you.)
2. Two (2) copies of a property sketch noting the distance of the proposed swimming pool to all property lines, all existing structures, impervious surfaces (driveways, patios, etc.), on site sewer or well systems and any established easements or right of ways.
3. A signed Inspection Checklist Form
4. The Contractor's Information Sheet signed and dated. List "Homeowner" as the general contractor if work is to be completed at no charge by a resident of the property.
5. Contractor's registration application and fee when construction is by a paid contractor.

(Please note: A copy of the plans and property sketch will be returned to you with your approved permit)

General Information:

1. Dimensions: Pool Shape _____ Width _____ Length _____ Depth _____ Total Sq. Ft. _____
2. Pool Type: Above-Ground In-Ground Liner Without Liner
3. Material Type: Concrete Fiberglass Steel Frame Other _____
4. Electrical Inspection Agency _____
5. Estimated Cost of Construction _____
6. Comments _____

The following to be completed by the Codes Administration Office

I hereby certify that I have examined this application and its attachments, and find them to be in accordance with the provisions of the West Brandywine Township Building Code and Zoning Ordinance.

PERMIT NO. _____

SWIMMING POOL INSPECTIONS

As the holder of this permit, you are required to comply with all of the provisions set forth in the International Code Council Building Code. You are required to schedule the following series of inspections as appropriate during the construction of your pool. It is your responsibility to contact the Township to schedule each of the required inspections. All inspections will be performed by a representative of the Township. You must schedule each inspection a minimum of 48 hours in advance. Failure to notify the Township prior to proceeding with the next phase of construction will result in a stop order and you will be obligated to expose that phase of construction which requires an inspection. If during an inspection the construction is found not in compliance with the applicable codes, a failed inspection will be issued (see adopted fee schedule for failed inspection fee). Twenty-four (24) hour notice is required to cancel a scheduled inspection. Your signature at the bottom of this page acknowledges that you have read and fully understand the requirements contained herein. Please contact the Township prior to accepting the terms of this permit if you should have any questions.

SETBACK INSPECTION

This inspection must be performed prior to excavation or land disturbance. The location of the pool and all property lines must be staked by the contractor or homeowner prior to this inspection. The purpose of this inspection is to determine if the location of the pool on the property meets the required setback distances contained within the Township's Zoning Ordinance, and to perform a visual inspection of the site to determine any issues which may not have been addressed during the permitting process.

FOUNDATION INSPECTION

This inspection is performed once all grading and bedding is completed for an above-ground pool, or once the excavation is complete and the reinforcing steel (or any other structural framework which will be concealed once the pool is completed) is in place. Silt fence or other approved erosion control devices must be installed prior to excavation or grading, and will be inspected for proper and effective installation. Plumbing for the pool must be properly installed at the time of inspection, however do not backfill or conceal. All plumbing components must be exposed for inspection and must be properly bedded. A rough electrical inspection (including the inspection of pool grounding) must be completed by an independent inspection agency prior to the foundation inspection. The contractor or homeowner must provide proof of a passed rough electrical inspection to the Township during the foundation inspection. For steel reinforced pool, ensure that all steel is properly tied and that all required steel clearances are met.

FINAL INSPECTION

This inspection is performed once the pool construction is complete, the pool filled and operational, and all related work items (including but not limited to grading and seeding, patios, lighting, ladders, diving boards, fencing, gates and door alarms) are complete. The pool may not be used until it passes the final inspection. The electric service to the pool must have passed a final inspection by an independent inspection agency prior to the Township's final inspection. Again, the contractor or homeowner must provide proof of a passed final electrical inspection to the Township.

I hereby acknowledge receipt of this form.

CONTRACTOR'S VERIFICATION REGISTRATION

FEE: \$45.00

DATE: _____

Contractor's engaging in any and all types of construction shall register with West Brandywine Township Codes Office annually prior to commencing work within the Township. A check shall accompany completed application, made payable to West Brandywine Township.

Please complete the application in its entirety. Sign and date application, include current Certificate of Insurance naming West Brandywine Township as the Certificate Holder, specifying minimum general liability and workers compensation limits as outlined below. If you are filing a self-employment or religious exemption, and are not required to carry Workers Compensation Insurance, **please complete and have notarized the attached Affidavit for submittal along with the Application. If the Affidavit is not completed, processing of the application will be delayed.** Also include a copy of your State License or at minimum, your PA number.

The following minimum insurances are required to obtain a valid Registration Certificate:

- a. General Liability - 1) Per Occurrence - \$500,000.00; 2) Per Personal Injury - \$500,000.00; 3) Property Damage - \$1,000,000.00
- b. Automobile Liability - 1) Combined Coverage - \$1,000,000.00
- c. Workers Compensation and Employer's Liability - 1) Each Accident - \$100,000.00

Don't Let Storm Water Run Off With Your Time and Money! *What the Construction Industry Should Know About Storm Water In Our Community*

The construction industry plays an important role in improving our community's quality of life by not only providing new development, but also protecting our streams and rivers through smart business practices that prevent pollution from leaving construction sites.

Storm water runoff leaving construction sites can carry pollutants such as dirt, construction debris, oil, and paint off-site and into storm drains. In our community, storm drains carry storm water runoff directly to local creeks, streams, and rivers with no treatment. Developers, contractors, and homebuilders can help to prevent storm water pollution by taking the following steps:

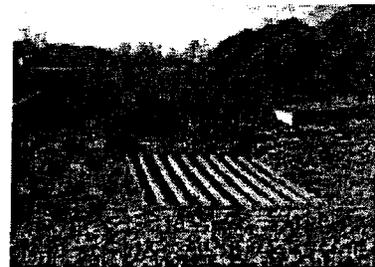

1. Comply with storm water permit requirements.
2. Practice erosion control and pollution prevention to keep construction sites "clean."
3. Conduct advanced planning and training to ensure proper implementation on-site.

The remainder of this fact sheet addresses these three steps.

Storm Water Permit Requirements for Construction Activity

Planning and permitting requirements exist for construction activities. These requirements are intended to minimize storm water pollutants leaving construction sites.

- Pennsylvania's Erosion and Sediment Pollution Control Program (25 Pa. Code, Chapter 102) requires Erosion and Sediment Control Plans for all earth disturbing activities.
- The National Pollutant Discharge Elimination System (NPDES) Permit Program (25 Pa. Code, Chapter 92) requires that construction activities disturbing greater than one acre submit a Notice of Intent for coverage under a general NPDES permit.

Knowing your requirements before starting a project and following them during construction can save you time and money, and demonstrate that you are a partner in improving our community's quality of life. For more information about these programs, contact your local county conservation district office or the Department of Environmental Protection.

Erosion Control Practices:

- Perimeter controls (e.g. silt fence)
- Sediment traps
- Immediate revegetation
- Phased, minimized grading
- Construction entrance
- Protection of streams and drainage ways
- Inlet protection

An Ounce of Prevention

Rain that falls onto construction sites is likely to carry away soil particles and other toxic chemicals present on construction sites (oil, grease, hazardous wastes, fuel). Storm water, if not properly managed, carries these pollutants to

What is Storm Water
Storm water is water from precipitation that flows across the ground and pavement when it rains or when snow and ice melt. The water seeps into the ground or drains into what are commonly known as storm sewers. Collectively, the draining water is called **storm water runoff**.

Pollution Prevention Practices:

- Designated fueling and vehicle maintenance area away from streams
- Remove trash and litter.
- Clean up leaks immediately
- Never wash down dirty pavement
- Place dumpsters under cover
- Dispose of all wastes properly.

streams, rivers, and lakes. Erosion and sediment control practices can serve as a first line of defense, minimizing clean up and maintenance costs, and the impacts to water resources caused by soil erosion during active construction. Erosion controls can reduce the volume of soil going into a sediment control device, such as a sediment trap, therefore, "clean out" frequencies are lower and maintenance costs are less. When possible, divert water around the construction site using berms or drainage ditches.

In addition, use pollution prevention and "good housekeeping measures" to reduce the pollution leaving construction sites as well. This can be as simple as minimizing the pollution source's contact with rainwater by covering it, maintaining a "clean site" by reducing trash and waste, and keeping vehicles well maintained.

The Best Laid Plans

Plans such as erosion and sediment control plans and storm water pollution prevention plans are important tools for outlining the erosion control and pollution prevention practices that you will use to manage storm water runoff prior to breaking ground. Developing good plans allows for proper budgeting and planning for the life of the project. Proper installation and maintenance of erosion and storm water controls is essential to a plan that works. Training for on-site staff helps to ensure the proper installation and maintenance of erosion controls and pollution prevention practices. Inspect controls and management techniques regularly to ensure they are working, especially after storm events. If polluted storm water is leaving the site, you may need to repair or add additional storm water controls.

The Bigger Storm Water Picture

Your community is preventing storm water pollution through a comprehensive storm water management program. This program addresses storm water pollution from construction, but it also deals with new development, illegal dumping to the storm sewer system, and municipal operations. It will also continue to educate the community and get everyone involved in making sure the only thing that storm water contributes to our streams is ... water! Contact your community or the Pennsylvania Department of Environmental Protection for more information about storm water management.
